if it's not blue, it's not true

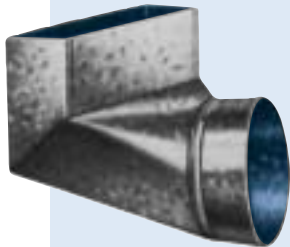

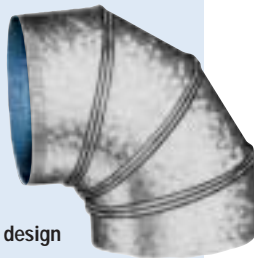

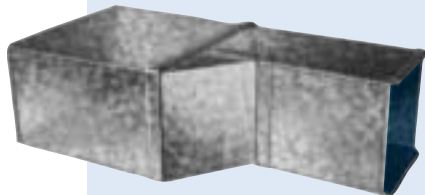

AglION™ coated Seal-Tite® Products

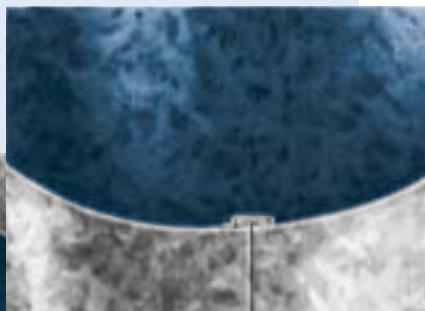

Other manufacturer's corners may have gaps.

Seal-Tite's fully closed corner eliminates leakage.

Seal-Tite's design reduces turbulence and resistance of air flow

Seal-Tite snap-lock pipe goes together quickly and easily, ensuring a leak-tight seam.

Insist on *Seal-Tite®* and its distinctive blue AglION™ anti-microbial coating, proven successful in controlling the growth and migration of a broad range of microbes including bacteria, mold, mildew, fungi, and algae.

For more than 100 years the best craftsmen have insisted on the handcrafted, leak-tite quality of Seal-Tite duct, pipe, and fittings.

Now we've just given you one more reason why you should insist on Seal-Tite.

Seal-Tite's comprehensive line of duct, pipe and fittings are carefully engineered for the most energy efficient distribution of conditioned air while maximizing air quality and comfort inside your home.

Eliminate Leakage

Whether conditioned air escapes or unconditioned/unfiltered air is drawn in, leakage reduces energy efficiency and the air quality of your home. All Seal-Tite hand-crafted fittings feature solid, fully closed corners to eliminate leakage and ensure your home comfort system is operating at maximum efficiency.

Optimize Air Flow

Seal-Tite elbows, register boots and other fittings allow air to flow smoothly and evenly *over* interior edges and angles instead of against them, increasing energy efficiency by reducing turbulence and resistance.

Easy Installation

Seal-Tite duct, pipe and fittings go together smoothly, adjust easily and stay together without tape or sheet metal screws, producing a leak-tite, durable seam. Your certified Seal-Tite installer is finished with the job quickly – reducing installation time and saving you money.

Energy Efficient

It's simple: minimize leakage, maximize air flow, save yourself money. Seal-Tite air distribution systems deliver as much as 16.8% more air volume and require 14.8% less energy. Get the most from your home heating and air conditioning system.

Superior Home Air Quality

Top quality Seal-Tite duct, pipe and fittings are constructed of prime grade galvanized metal to eliminate rusting and peeling. Plus, with our unique closed-corner design, dirt and unfiltered air doesn't get in and cold or hot air doesn't escape.

Quiet Operation

Full gauge metal and leak-tite construction eliminates humming, rattling, whispering and whistling noises for quiet operation in your home. Reduced turbulence and resistance also reduces noises through out the air distribution system.

Durable, Contemporary Design

Seal-Tite delivers durability with eye appeal. Full gauge metal with double-lapped, hand-hammered seams mean sturdy, rigid construction, while the streamlined design and bright galvanized finish provides a clean, modern look.

Seal-Tite Rx™

the contractor's prescription for
anti-microbial duct, pipe, and fittings

How It Works

A select line of Seal-Tite premium products are manufactured using galvanized steel pre-coated with an epoxy including AgION™ anti-microbial compound. This is a patented Zeolite inorganic ceramic matrix that provides a controlled release of silver ions to protect against the growth of bacteria, mold and mildew.

The Benefits

- Provides defense against the growth of bacteria, mold, mildew, fungi, and algae.
- Excellent resistance to fingerprints, watermarks, discoloration and staining.
- Anti-microbial agent won't wash out. It lasts as long as the coating is on the steel. It even protects against scratches less than 1/4".
- Excellent for trunk duct and fittings, return air products, plenums, filter frames, drain pans, and pipe with a maximum operating temperature of 300° F.

And, as always, it's as easy to install as our other Seal-Tite premium products.

if it fits right,

looks right

stays right

and is leak-tite –

it's seal-tite.
